

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims** (deleted text being struck through and added text being underlined):

- 1        1. (Original) In a computer network comprising a client computer and a plurality of servers, wherein each server is capable of being assigned at least one conversion rating, each conversion rating corresponding to a first file format unreadable by the client computer that the respective server is capable of converting into a second file format readable by the client computer, a method for selecting one of the plurality of servers comprising:
  - 7        receiving a file on the client computer, wherein the file is written in a source format unreadable by the client computer; and
  - 9        selecting one of the plurality of servers having the highest conversion rating assigned thereto corresponding to the source format of the received file.
- 1        2. (Original) The method of claim 1, further comprising: selecting a conversion format for the received file, wherein the conversion format is readable by the client computer, and further wherein the selected server is capable of converting the received file written in the source format into the received file written in the conversion format.
- 1        3. (Original) The method of claim 1, further comprising: reading a Multipurpose Internet Mail Extension (MIME) attached to the received file to identify the source format of the received file.

**BEST AVAILABLE COPY**

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       4. (Original) The method of claim 1, wherein the step of selecting one  
2 of the plurality of servers further comprises:

3           broadcasting the source format of the received file to the plurality of  
4 servers;

5           in response to the broadcast, receiving from at least one of the  
6 plurality of servers the conversion rating assigned thereto corresponding to  
7 the source format of the received file; and

8           selecting one of the plurality of servers having the highest received  
9 conversion rating.

1       5. (Currently Amended) The method of claim 1, wherein the client  
2 computer comprises a lookup table having one or more entries, each entry  
3 including a file format unreadable by the client computer and a preferred  
4 one of the plurality of servers capable of converting the unreadable file  
5 format into a file format readable by the client computer, and wherein the  
6 step of selecting one of the plurality of servers further comprises:

7           locating the entry in the lookup table corresponding to the source  
8 format of the received file; and

9           selecting the server preferred one of the plurality of servers included  
10 in the located entry of the lookup table.

1       6. (Original) The method of claim 1, wherein the client computer and  
2 the selected server utilize different operating systems.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       7. (Original) The method of claim 1, further comprising:  
2           transmitting to the selected server the received file written in the  
3       source format unreadable by the client computer;  
4           receiving from the selected server the received file written in a  
5       conversion format readable by the client computer, wherein the received file  
6       written in the source format is converted by the selected server into the  
7       received file written in the conversion format; and  
8           displaying the received file written in the conversion format on the  
9       client computer using a native application on the client computer.

1       8. (Original) The method of claim 7, wherein the conversion format  
2       for the received file is Hyper Text Markup Language (HTML) format, and  
3       the native application on the client computer is a web browser application.

1       9. (Original) The method of claim 7, wherein the source format of the  
2       received file is compressed format, and the conversion format for the  
3       received file is decompressed format.

1       10. (Original) The method of claim 9, wherein the source format of  
2       the received file is ZIP format.

1       11. (Original) The method of claim 7, wherein the source format of  
2       the received file is encrypted format, and the conversion format for the  
3       received file is decrypted format.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       12. (Original) The method of claim 1, further comprising:  
2           transmitting to the selected server the received file written in the  
3       source format unreadable by the client computer; and  
4           receiving from the selected server a location of the received file  
5       written in a conversion format readable by the client computer, wherein the  
6       received file written in the source format is converted by the selected server  
7       into the received file written in the conversion format.

1       13. (Original) The method of claim 12, further comprising:  
2           directing a web browser application on the client computer to the  
3       location of the received file written in the conversion format on the selected  
4       server; and  
5           downloading the received file written in the conversion format from  
6       the selected server onto the client computer using the web browser  
7       application.

1       14. (Original) The method of claim 13, wherein the location of the  
2       received file written in the conversion format is one of: a Uniform Resource  
3       Locator (URL) and an Internet Protocol (IP) address.

1       15. (Original) The method of claim 12, wherein the conversion format  
2       for the received file is Hyper Text Markup Language (HTML) format.

1       16. (Original) The method of claim 12, wherein the source format of  
2       the received file is compressed format, and the conversion format for the  
3       received file is decompressed format.

1       17. (Original) The method of claim 12, wherein the source format of  
2       the received file is encrypted format, and the conversion format for the  
3       received file is decrypted format.

Appn. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       18. (Original) The method of claim 1, further comprising:  
2           transmitting to the selected server the received file written in the  
3           source format unreadable by the client computer;  
4           receiving from the selected server display content information,  
5           wherein the received file is opened in an application running on the selected  
6           server and the display content information is generated therefrom; and  
7           displaying the display content information on the client computer.

1       19. (Original) The method of claim 1, wherein the received file is a  
2       file archive including a plurality of files written in a compressed format  
3       unreadable by the client computer, further comprising:  
4           transmitting to the selected server the file archive written in the  
5           compressed format;  
6           receiving from the selected server an index page including a plurality  
7           of links, each link corresponding to one of the plurality of files in the file  
8           archive written in a decompressed format readable by the client computer,  
9           wherein the file archive written in the compressed format is converted by  
10          the selected server into the file archive written in the decompressed format;  
11          and  
12          displaying the index page on the client computer.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1        20. (Original) A storage medium readable by a client computer and  
2        having instructions encoded thereon for causing the client computer to  
3        perform, in a computer network comprising the client computer and a  
4        plurality of servers, wherein each server is capable of being assigned at  
5        least one conversion rating, each conversion rating corresponding to a first  
6        file format unreadable by the client computer that the respective server is  
7        capable of converting into a second file format readable by the client  
8        computer, a method for selecting one of the plurality of servers, the method  
9        comprising the steps of:

10        receiving a file on the client computer, wherein the file is written in a  
11        source format unreadable by the client computer; and

12        selecting one of the plurality of servers having the highest conversion  
13        rating assigned thereto corresponding to the source format of the received  
14        file.

1        21. (Original) The storage medium of claim 20, wherein the step of  
2        selecting one of the plurality of servers further comprises:

3        broadcasting the source format of the received file to the plurality of  
4        servers;

5        in response to the broadcast, receiving from at least one of the  
6        plurality of servers the conversion rating assigned thereto corresponding to  
7        the source format of the received file; and

8        selecting one of the plurality of servers having the highest received  
9        conversion rating.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1        22. (Currently Amended) The storage medium of claim 20, wherein  
2        the client computer comprises a lookup table having one or more entries,  
3        each entry including a file format unreadable by the client computer and a  
4        preferred one of the plurality of servers capable of converting the  
5        unreadable file format into a file format readable by the client computer,  
6        and wherein the step of selecting one of the plurality of servers further  
7        comprises:

8                locating the entry in the lookup table corresponding to the source  
9        format of the received file; and

10                selecting the server preferred one of the plurality of servers included  
11        in the located entry of the lookup table.

1        23. (Original) In a computer network comprising a client computer  
2        and a plurality of servers, wherein each server is capable of being assigned  
3        at least one conversion rating, each conversion rating corresponding to a  
4        first file format unreadable by the client computer that the respective server  
5        is capable of converting into a second file format readable by the client  
6        computer, the client computer comprising:

7                a processor;

8                a memory;

9                equipment for coupling to the network, wherein the client computer is  
10        capable of intermittently connecting to at least one of the plurality of  
11        servers through the network; and

12                a computer program stored on the memory and capable of being  
13        executed by the processor, wherein the program is capable of performing the  
14        steps of:

15                receiving a file on the client computer, wherein the file is  
16        written in a source format unreadable by the client computer; and

17                selecting one of the plurality of servers having the highest  
18        conversion rating assigned thereto corresponding to the source format  
19        of the received file.

Appn. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1        24. (Original) The client computer of claim 23, wherein the step of  
2        selecting one of the plurality of servers further comprises:  
3            broadcasting the source format of the received file to the plurality of  
4        servers;  
5            in response to the broadcast, receiving from at least one of the  
6        plurality of servers the conversion rating assigned thereto corresponding to  
7        the source format of the received file; and  
8            selecting one of the plurality of servers having the highest received  
9        conversion rating.

1        25. (Currently Amended) The client computer of claim 23, further  
2        comprising: a lookup table stored on the [[[S]]] memory and having one or  
3        more entries, each entry including a file format unreadable by [[[^--•]]] the  
4        client computer and a preferred one of the plurality of servers capable of  
5        converting the unreadable file format into a file format readable by the  
6        client computer, wherein the step of selecting one of the plurality of servers  
7        further comprises:  
8            locating the entry in the lookup table corresponding to the source  
9        format of the received file; and  
10          selecting the server included in the located entry of the lookup table.

1        26. (Original) In a computer network comprising a client computer and  
2        a plurality of servers, wherein each server is capable of being assigned at  
3        least one conversion rating, each conversion rating corresponding to a first  
4        file format unreadable by the client computer that the respective server is  
5        capable of converting into a second file format readable by the client  
6        computer, a method for selecting one of the plurality of servers comprising:  
7            receiving a file on the client computer, wherein the file is written in a  
8        format unreadable by the client computer;  
9            transmitting the format of the received file to a resource locator  
10          server; and receiving a selection of one of the plurality of servers from the

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

11 resource locator server, wherein the selected server has the highest  
12 conversion rating assigned thereto corresponding to the format of the  
13 received file.

1 27. (Original) The method of claim 26, further comprising reading a  
2 Multipurpose Internet Mail Extension (MIME) attached to the received file  
3 to identify the format of the received file.

1 28. (Original) The method of claim 26, further comprising receiving  
2 contact information for the selected server from the resource locator server.

1 29. (Original) The method of claim 28, wherein the contact  
2 information for the selected server comprises one of: a Uniform Resource  
3 Locator (URL) and an Internet Protocol (IP) address.

1 30. (Original) In a computer network comprising a client computer  
2 and a plurality of servers, wherein each server is capable of being assigned  
3 at least one conversion rating, each conversion rating corresponding to a  
4 first file format unreadable by the client computer that the respective server  
5 is capable of converting into a second file format readable by the client  
6 computer, a method for displaying a file archive located on the Internet,  
7 wherein the file archive includes a plurality of files and is written in a  
8 source format unreadable by the client computer, comprising:

9 selecting one of the plurality of servers having the highest conversion  
10 rating assigned thereto corresponding to the source format of the file  
11 archive;

12 transmitting a location of the file archive on the Internet to the  
13 selected server;

14 receiving from the selected server an index page including a plurality  
15 of links, each link corresponding to one of the plurality of files in the file  
16 archive written in a conversion format readable by the client computer,

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

17 wherein the file archive written in the source format is converted by the  
18 selected server into the file archive written in the conversion format; and  
19 displaying the index page on the client computer.

1 31. (Original) The method of claim 30, wherein the source format of  
2 the file archive is compressed format, and the conversion format of the file  
3 archive is decompressed format.

1 32. (Original) The method of claim 30, wherein the index page is  
2 written in Hyper Text Markup Language (HTML) and displayed on the client  
3 computer using a web browser application

1 33. (Original) The method of claim 30, wherein the location of the  
2 file archive on the Internet is one of: a Uniform Resource Locator (URL)  
3 and an Internet Protocol (IP) address.

1 34. (Original) In a computer network comprising a client computer  
2 and a plurality of servers, wherein each server is capable of being assigned  
3 at least one conversion rating, each conversion rating corresponding to a  
4 first file format unreadable by the client computer that the respective server  
5 is capable of converting into a second file format readable by the client  
6 computer, a method for selecting one of the plurality of servers comprising:  
7 receiving a file on the client computer, wherein the received file is  
8 written in a format unreadable by the client computer;  
9 broadcasting the format of the received file to the plurality of servers;  
10 in response to the broadcast, receiving from at least one of the  
11 plurality of servers the conversion rating assigned thereto corresponding to  
12 the broadcasted format of the received file; and  
13 selecting one of the plurality of servers having the highest received  
14 conversion rating.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       35. (Original) The method of claim 34, further comprising:  
2           transmitting to the selected server the received file written in the  
3       format unreadable by the client computer;  
4           receiving from the selected server the received file written in a  
5       conversion format readable by the client computer, wherein the received file  
6       written in the source format is converted by the selected server into the  
7       received file written in the conversion format; and  
8           displaying the received file written in the conversion format on the  
9       client computer using a native application on the client computer.

1       36. (Original) The method of claim 34, further comprising:  
2           transmitting to the selected server the received file written in the  
3       source format unreadable by the client computer; and  
4           receiving from the selected server a location of the received file  
5       written in a conversion format readable by the client computer, wherein the  
6       received file written in the source format is converted by the selected server  
7       into the received file written in the conversion format.

1       37. (Original) The method of claim 34, further comprising:  
2           transmitting to the selected server the received file written in the  
3       source format unreadable by the client computer;  
4           receiving from the selected server display content information,  
5       wherein the received file is opened in an application running on the selected  
6       server and the display content information is generated therefrom; and  
7           displaying the display content information on the client computer.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       38. (Original) The method of claim 34, wherein the received file is a  
2 file archive including a plurality of files written in a compressed format  
3 unreadable by the client computer, further comprising:

4               transmitting to the selected server the file archive written in the  
5 compressed format;

6               receiving from the selected server an index page including a plurality  
7 of links, each link corresponding to one of the plurality of files in the file  
8 archive written in a decompressed format readable by the client computer,  
9 wherein the file archive written in the compressed format is converted by  
10 the selected server into the file archive written in the decompressed format;  
11 and

12               displaying the index page on the client computer.

1       39. (Original) A storage medium readable by a client computer and  
2 having instructions encoded thereon for causing the client computer to  
3 perform, in a computer network comprising the client computer and a  
4 plurality of servers, wherein each server is capable of being assigned at  
5 least one conversion rating, each conversion rating corresponding to a first  
6 file format unreadable by the client computer that the respective server is  
7 capable of converting into a second file format readable by the client  
8 computer, a method for selecting one of the plurality of servers, the method  
9 comprising the steps of:

10               receiving a file on the client computer, wherein the received file is  
11 written in a format unreadable by the client computer;

12               broadcasting the format of the received file to the plurality of servers;

13               in response to the broadcast, receiving from at least one of the  
14 plurality of servers the conversion rating assigned thereto corresponding to  
15 the broadcasted format of the received file; and

16               selecting one of the plurality of servers having the highest received  
17 conversion rating.

Appln. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       40. (Original) In a computer network comprising a client computer  
2       and a plurality of servers, wherein each server is capable of being assigned  
3       at least one conversion rating, each conversion rating corresponding to a  
4       first file format unreadable by the client computer that the respective server  
5       is capable of converting into a second file format readable by the client  
6       computer, the client computer comprising:

7            a processor;  
8            a memory;  
9            equipment for coupling to the network, wherein the client computer is  
10      capable of intermittently connecting to at least one of the plurality of  
11      servers through the network; and

12            a computer program stored on the memory and capable of being  
13      executed by the processor, wherein the program is capable of performing the  
14      steps of:

15            receiving a file on the client computer, wherein the received file is  
16      written in a format unreadable by the client computer;  
17            broadcasting the format of the received file to the plurality of servers;  
18            in response to the broadcast, receiving from at least one of the  
19      plurality of servers the conversion rating assigned thereto corresponding to  
20      the broadcasted format of the received file; and  
21            selecting one of the plurality of servers having the highest received  
22      conversion rating.

1       41. (Previously Presented) The method of claim 1, wherein the step of  
2      receiving includes recognizing by the client computer that the client  
3      computer is unable to read the file due to the source format of the file.

1       42. (Previously Presented) The method of claim 1, further comprising  
2      failing to read the file by the client computer because the source format of  
3      the file is unreadable by the client computer.

Appn. No. 09/874,630  
Amendment dated September 8, 2005  
Reply to Office Action mailed June 8, 2005

1       43. (New) The method of claim 1, wherein a file is written in a source  
2 format unreadable by the client computer when the format of the file needs  
3 to be converted into a different format from the source format in order to be  
4 readable by the client computer.

1       44. (New) The method of claim 1, wherein a file is written in a source  
2 format unreadable by the client computer when substantially an entirety of  
3 the file is unreadable by the client computer in the source format.
